UTFT

Multi-Platform Universal TFT display library

Manual
Introduction:

This library was originally the continuation of my ITDB02_Graph, ITDB02_Graph16 and RGB/GLCD libraries for Arduino and chipKit. As the number of supported display modules and controllers started to increase I felt it was time to make a single, universal library as it will be much easier to maintain in the future.

Basic functionality of this library was originally based on the demo-code provided by ITead studio (for the ITDB02 modules) and NKC Electronics (for the RGB GLCD module/shield).

This library supports a number of 8bit, 16bit and serial graphic displays, and will work with both Arduino, chipKit boards and select TI LaunchPads. For a full list of tested display modules and controllers, see the document UTFT_Supported_display_modules_&_controllers.pdf.

You can always find the latest version of the library at http://www.RinkyDinkElectronics.com/

For version information, please refer to version.txt.

IMPORTANT:

When using 8bit and 16bit display modules there are some requirements you must adhere to. These requirements can be found in the document UTFT_Requirements.pdf.

There are no special requirements when using serial displays.

Since most people have only one or possibly two different display modules a lot of memory has been wasted to keep support for many unneeded controller chips. As of v1.1 you now have the option to easily remove this unneeded code from the library by disabling the controllers you don't need you can reduce the memory footprint of the library by several Kb. For more information, please refer to memorysaver.h.

TFT controllers used only by display modules and shields that have been retired by their vendors are as of v2.82 disabled by default.

If you are using the "AquaLEDSource All in One Super Screw Shield" on a chipKit Max32, please read the comment in hardware/pic32/HW_PIC32_defines.h

If you are using the "CTE TFT LCD/SD Shield for Arduino Due" or the "ElecHouse TFT LCD Screen Shield for Arduino DUE / Taijiuino", please read the comment in hardware/arm/HW_ARM_defines.h

8 bit display shields designed for use on Arduino Uno (and similarly sized boards) can now be used on Arduino Megas. Please read the comment in hardware/avr/HW_AVR_defines.h

Some of the larger (4.3"+) display modules have not been tested on all supported development boards due to the high current requirement for the LED backlight.

This library is licensed under a CC BY-NC-SA 3.0 (Creative Commons Attribution-NonCommercial-ShareAlike 3.0 Unported) License.

For more information see: http://creativecommons.org/licenses/by-nc-sa/3.0/
DEFINED LITERALS:

Alignment
For use with print(), printNumI() and printNumF()

| LEFT: 0 |
| RIGHT: 9999 |
| CENTER: 9998 |

Orientation
For use with InitLCD()

| PORTRAIT: 0 |
| LANDSCAPE: 1 |

VGA Colors
Predefined colors for use with setColor() and setBackColor()

- VGA_BLACK
- VGA_BURGON
- VGA_GREEN
- VGA_NAVY
- VGA_SILVER
- VGA_BLUE
- VGA_GRAY
- VGA_PURPLE
- VGA_YELLOW
- VGA_AQUA
- VGA_TRANSPARENT (only valid for setBackColor())

Display model
For use with UTFT()

Please see UTFT_Supported_display_modules_&_controllers.pdf

INCLUDED FONTS:

SmallFont

Charactersize: 8x12 pixels
Number of characters: 95

BigFont

Charactersize: 16x16 pixels
Number of characters: 95

SevenSegNumFont

Charactersize: 32x50 pixels
Number of characters: 30

More fonts can be found in the "Resources" section of http://www.RinkyDinkElectronics.com/. There is also a tool there to make your own fonts if you cannot find any that suit your needs. For those who want to know the specifications of the font arrays there is also an explanation of that there.
FUNCTIONS:

**UTFT(Model, RS, WR, CS, RST[, ALE]):**
The main class constructor when using 8bit or 16bit display modules.

**Parameters:**
- **Model:** See the separate document for the supported display modules
- **RS:** Pin for Register Select
- **WR:** Pin for Write
- **CS:** Pin for Chip Select
- **RST:** Pin for Reset
- **ALE:** *<optional>* Only used for latched 16bit shields
  - Pin for Latch signal

**Usage:**
UTFT myGLCD(ITDB32S,19,18,17,16); // Start an instance of the UTFT class

**UTFT(Model, SDA, SCL, CS, RST[, RS]):**
The main class constructor when using serial display modules.

**Parameters:**
- **Model:** See the separate document for the supported display modules
- **SDA:** Pin for Serial Data
- **SCL:** Pin for Serial Clock
- **CS:** Pin for Chip Select
- **RST:** Pin for Reset
- **RS:** *<optional>* Only used for 5pin serial modules
  - Pin for Register Select

**Usage:**
UTFT myGLCD(ITDB18SP,11,10,9,12,8); // Start an instance of the UTFT class

**InitLCD([orientation]);**
Initialize the LCD and set display orientation.

**Parameters:**
- **Orientation:** *<optional>*
  - PORTRAIT
  - LANDSCAPE (default)

**Usage:**
myGLCD.InitLCD(); // Initialize the display

**Notes:**
This will reset color to white with black background. Selected font will be reset to none.

**getDisplayXSize();**
Get the width of the screen in the current orientation.

**Parameters:**
- None

**Returns:** Width of the screen in the current orientation in pixels

**Usage:**
Xsize = myGLCD.getDisplayXSize(); // Get the width

**getDisplayYSize();**
Get the height of the screen in the current orientation.

**Parameters:**
- None

**Returns:** Height of the screen in the current orientation in pixels

**Usage:**
Ysize = myGLCD.getDisplayYSize(); // Get the height
# LcdOff();

Turn off the LCD. No commands will be executed until a LcdOn(); is sent.

<table>
<thead>
<tr>
<th>Parameters</th>
<th>None</th>
</tr>
</thead>
<tbody>
<tr>
<td>Usage</td>
<td>myGLCD.lcdOff(); // Turn off the lcd</td>
</tr>
<tr>
<td>Notes</td>
<td>This function is currently only supported on PCF8833 and CPLD-based displays. CPLD-based displays will only turn off the backlight. It will accept further commands/writes.</td>
</tr>
</tbody>
</table>

# LcdOn();

Turn on the LCD after issuing a LcdOff()-command.

<table>
<thead>
<tr>
<th>Parameters</th>
<th>None</th>

</table>
| drawPixel(x, y)      | Draw a single pixel.                             | x: x-coordinate of the pixel
|                      |                                                  | y: y-coordinate of the pixel                                               |
|                      | Usage: myGLCD.drawPixel(119,159); // Draw a single pixel |
| drawLine(x1, y1, x2, y2) | Draw a line between two points.                | x1: x-coordinate of the start-point
|                      |                                                  | y1: y-coordinate of the start-point
|                      |                                                  | x2: x-coordinate of the end-point                                          |
|                      |                                                  | y2: y-coordinate of the end-point                                          |
|                      | Usage: myGLCD.drawLine(0,0,239,319); // Draw a diagonal line |
| drawRect(x1, y1, x2, y2) | Draw a rectangle between two points.        | x1: x-coordinate of the start-corner
|                      |                                                  | y1: y-coordinate of the start-corner
|                      |                                                  | x2: x-coordinate of the end-corner                                        |
|                      |                                                  | y2: y-coordinate of the end-corner                                        |
|                      | Usage: myGLCD.drawRect(119,159,239,319); // Draw a rectangle |
| drawRoundRect(x1, y1, x2, y2) | Draw a rectangle with slightly rounded corners between two points. The minimum size is 5 pixels in both directions. If a smaller size is requested the rectangle will not be drawn. | x1: x-coordinate of the start-corner
|                      |                                                  | y1: y-coordinate of the start-corner
|                      |                                                  | x2: x-coordinate of the end-corner                                        |
|                      |                                                  | y2: y-coordinate of the end-corner                                        |
|                      | Usage: myGLCD.drawRoundRect(0,0,119,159); // Draw a rounded rectangle |
| fillRect(x1, y1, x2, y2) | Draw a filled rectangle between two points.    | x1: x-coordinate of the start-corner
|                      |                                                  | y1: y-coordinate of the start-corner
|                      |                                                  | x2: x-coordinate of the end-corner                                        |
|                      |                                                  | y2: y-coordinate of the end-corner                                        |
|                      | Usage: myGLCD.fillRect(119,0,239,159); // Draw a filled rectangle |
| fillRoundRect(x1, y1, x2, y2) | Draw a filled rectangle with slightly rounded corners between two points. The minimum size is 5 pixels in both directions. If a smaller size is requested the rectangle will not be drawn. | x1: x-coordinate of the start-corner
|                      |                                                  | y1: y-coordinate of the start-corner
|                      |                                                  | x2: x-coordinate of the end-corner                                        |
|                      |                                                  | y2: y-coordinate of the end-corner                                        |
|                      | Usage: myGLCD.fillRoundRect(0,0,119,159); // Draw a filled, rounded rectangle |
| drawCircle(x, y, radius) | Draw a circle with a specified radius.        | x: x-coordinate of the center of the circle
|                      |                                                  | y: y-coordinate of the center of the circle                               |
|                      |                                                  | radius: radius of the circle in pixels                                    |
|                      | Usage: myGLCD.drawCircle(119,159,20); // Draw a circle with a radius of 20 pixels |
| fillCircle(x, y, radius) | Draw a filled circle with a specified radius. | x: x-coordinate of the center of the circle
|                      |                                                  | y: y-coordinate of the center of the circle                               |
|                      |                                                  | radius: radius of the circle in pixels                                    |
|                      | Usage: myGLCD.fillCircle(119,159,10); // Draw a filled circle with a radius of 10 pixels |
```

Library Manual: UTFT
**print(st, x, y[, deg]);**

Print a string at the specified coordinates.
You can use the literals LEFT, CENTER and RIGHT as the x-coordinate to align the string on the screen.

**Parameters:**
- `st`: the string to print
- `x`: x-coordinate of the upper, left corner of the first character
- `y`: y-coordinate of the upper, left corner of the first character
- `deg`: <optional>
  Degrees to rotate text (0-359). Text will be rotated around the upper left corner.

**Usage:**
myGLCD.print("Hello, World!",CENTER,0); // Print "Hello, World!"

**Notes:**
- CENTER and RIGHT will not calculate the coordinates correctly when rotating text.
- The string can be either a char array or a String object.

**printNumI(num, x, y[, length[, filler]]);**

Print an integer number at the specified coordinates.
You can use the literals LEFT, CENTER and RIGHT as the x-coordinate to align the string on the screen.

**Parameters:**
- `num`: the value to print (-2,147,483,648 to 2,147,483,647) INTEGERS ONLY
- `x`: x-coordinate of the upper, left corner of the first digit/sign
- `y`: y-coordinate of the upper, left corner of the first digit/sign
- `length`: <optional>
  Minimum number of digits/characters (including sign) to display
- `filler`: <optional>
  Filler character to use to get the minimum length. The character will be inserted in front of the number, but after the sign. Default is ' ' (space).

**Usage:**
myGLCD.printNumI(num,CENTER,0); // Print the value of "num"

**printNumF(num, dec, x, y[, divider[, length[, filler]]]);**

Print a floating-point number at the specified coordinates.
You can use the literals LEFT, CENTER and RIGHT as the x-coordinate to align the string on the screen.

**WARNING:** Floating point numbers are not exact, and may yield strange results when compared. Use at your own discretion.

**Parameters:**
- `num`: the value to print (See note)
- `dec`: digits in the fractional part (1-5) 0 is not supported. Use printNumI() instead.
- `x`: x-coordinate of the upper, left corner of the first digit/sign
- `y`: y-coordinate of the upper, left corner of the first digit/sign
- `divider`: <optional>
  Single character to use as decimal point. Default is '.'
- `length`: <optional>
  Minimum number of digits/characters (including sign) to display
- `filler`: <optional>
  Filler character to use to get the minimum length. The character will be inserted in front of the number, but after the sign. Default is ' ' (space).

**Usage:**
myGLCD.printNumF(num, 3, CENTER,0); // Print the value of "num" with 3 fractional digits

**setFont(fontname);**

Select font to use with print(), printNumI() and printNumF().

**Parameters:**
- `fontname`: Name of the array containing the font you wish to use

**Usage:**
myGLCD.setFont(BigFont); // Select the font called BigFont

**Notes:**
- You must declare the font-array as an external or include it in your sketch.

**getFont();**

Get the currently selected font.

**Parameters:**
- None

**Returns:**
- Currently selected font

**Usage:**
CurrentFont = myGLCD.getFont(); // Get the current font

**getFontXsize();**

Get the width of the currently selected font.

**Parameters:**
- None

**Returns:**
- Width of the currently selected font in pixels

**Usage:**
Xsize = myGLCD.getFontXsize (); // Get font width

**getFontYsize();**

Get the height of the currently selected font.

**Parameters:**
- None

**Returns:**
- Height of the currently selected font in pixels

**Usage:**
Ysize = myGLCD.getFontYsize (); // Get font height
**drawBitmap (x, y, sx, sy, data[, scale]);**

**Draw a bitmap on the screen.**

**Parameters:**
- x: x-coordinate of the upper, left corner of the bitmap
- y: y-coordinate of the upper, left corner of the bitmap
- sx: width of the bitmap in pixels
- sy: height of the bitmap in pixels
- data: array containing the bitmap-data
- scale: [optional]
  Scaling factor. Each pixel in the bitmap will be drawn as <scale>x<scale> pixels on screen.

**Usage:**
- myGLCD.drawBitmap(0, 0, 32, 32, bitmap); // Draw a 32x32 pixel bitmap

**Notes:**
- You can use the online-tool "ImageConverter 565" or "ImageConverter565.exe" in the Tools-folder to convert pictures into compatible arrays. The online-tool can be found on my website.
- Requires that you `#include <avr/pgmspace.h>` when using an Arduino other than Arduino Due.

**drawBitmap (x, y, sx, sy, data, deg, rox, roy);**

**Draw a bitmap on the screen with rotation.**

**Parameters:**
- x: x-coordinate of the upper, left corner of the bitmap
- y: y-coordinate of the upper, left corner of the bitmap
- sx: width of the bitmap in pixels
- sy: height of the bitmap in pixels
- data: array containing the bitmap-data
- deg: Degrees to rotate bitmap (0-359)
- rox: x-coordinate of the pixel to use as rotational center relative to bitmaps upper left corner
- roy: y-coordinate of the pixel to use as rotational center relative to bitmaps upper left corner

**Usage:**
- myGLCD.drawBitmap(50, 50, 32, 32, bitmap, 45, 16, 16); // Draw a bitmap rotated 45 degrees around its center

**Notes:**
- You can use the online-tool "ImageConverter 565" or "ImageConverter565.exe" in the Tools-folder to convert pictures into compatible arrays. The online-tool can be found on my website.
- Requires that you `#include <avr/pgmspace.h>` when using an Arduino other than Arduino Due.
